

Team Page & Login Requirements

22-NBN-UX DESIGN PRACTICES USING AI

PREPARED BY: BUSINESS ANALYST | HELBERT PEMBA

CONTENTS

- [Purpose](#)
- [Team Page: Content Fields](#)
- [Login Page: Current State: Requires Restyling](#)
- [Login Page: Scope Confirmation](#)
- [Edge Cases](#)

1. Purpose

This document defines the content fields required for the Team page, confirms that the current login page work is styling-only with no change to authentication logic or session behaviour, and records edge cases the design and development team should account for. It responds to the open checklist items: fields listed with validation/display rules, login scope stated, and edge cases documented.

2. Team Page: Content Fields

Each team member card requires four fields: name, photo, role and blurb. Rules below define validation and display.

Field	Type	Required?	Validation Rules	Display Rules
Name	Text	Required	2-60 characters Letters, spaces, hyphens and apostrophes only Must be unique per member profile (paired with member ID, not enforced as literal text uniqueness)	Primary heading on the team card, bold Truncate with ellipsis beyond card width; full name shown on hover/tooltip
Photo	Image upload	Optional	Formats: JPG, PNG or WEBP Max file size: 10 MB Recommended minimum 300 x 300 px, square aspect ratio	Circular avatar, fixed size (e.g. 120 x 120 px), object-fit: cover Missing or broken image falls back to an initials avatar
Role	Text (dropdown, editable)	Required	Selected from a predefined list (e.g. Business Analyst, Project Manager, UX Designer, Developer, QA/Tester) Free-text override capped at 40 characters if 'Other' is chosen	Shown as a subtitle/badge under the name One role per member; if a member has multiple responsibilities, primary role is shown, others listed in the blurb
Blurb	Text area	Optional	Recommended max 250 characters, hard cap 300 Plain text only (no HTML); line breaks stripped	2-3 lines shown by default, truncated with a 'Read more' expand control if it overflows Empty blurb shows italic placeholder text ('provide a bio') rather than an empty gap

3. Login Page: Current State Requires Restyling

The goal of this work is to restyle the existing Landing, Sign in and Create account pages: not to change what they do. The table below captures the current field set, copy and flow as the agreed baseline. The restyle must preserve every element, its order and its function; only the visual treatment (colour, typography, spacing, layout, iconography) changes.

Page	Current elements
Landing	App name as page heading, with placeholder subtext ('Your app description goes here...') Two entry buttons: Sign in, Create account
Sign in	Heading 'Sign in' with subtext 'Enter your credentials to continue' 'Continue with Google' button (OAuth) 'OR' divider Email field (placeholder: you@example.com) Password field (masked input) 'Sign in' primary button Footer link: "Don't have an account? Create one"
Create account	Heading 'Create account' with subtext 'Get started for free' 'Continue with Google' button (OAuth) 'OR' divider Name field (placeholder: Your full name) Email field (placeholder: you@example.com) Password field (placeholder states the rule: 'Min. 8 characters, 1 uppercase, 1 number') Confirm password field (masked input) 'Create account' primary button Footer link: "Already have an account? Sign in"

4. Login Page: Scope Confirmation

The current login page work is styling-only. No changes are being made to authentication logic, credential validation, session handling, token expiry, or any backend behaviour. The table below sets the boundary explicitly for the dev team and PM/UX sign off.

In scope (styling only)	Out of scope (no logic changes)
Colours, fonts, spacing and layout Logo, imagery and branding elements Button, input and error message styling (visual appearance only) Responsive/mobile layout adjustments	Authentication logic (credential checks, password hashing, MFA) Session or token handling, timeouts and expiry Form field names/IDs and submission handlers Validation logic and error message text/behaviour Redirect logic, auth provider configuration, backend endpoints

Confirmation: restyling the login page must not alter field names/IDs, submission handlers, redirect behaviour, or error handling logic: only their visual presentation. Every field, button and link listed in Section 3 must remain present, in the same order, with the same copy and the same behaviour.

5. Edge Cases

Team page

- Missing or broken photo : show a fallback avatar using the member's initials on a neutral background instead of a broken image icon.
- Long blurb text: truncate to the visible area (2-3 lines) with a 'Read more' expand control; never let it push card layout out of alignment.
- No blurb provided: show an italic placeholder ('provide a bio') rather than leaving a blank gap in the card.
- Missing role: treat as a required-field validation error at data entry; the card should never render with an empty role badge.
- Very long name: truncate with ellipsis at the card width and show the full name on hover/tooltip.
- Duplicate names within the team: differentiate members by a unique member ID/email internally, never by name matching.
- Special characters or emoji in name/blurb: accented characters (e.g. é, ñ) must display correctly; input should be sanitised to prevent script injection, not blocked outright.
- Non-square or odd-aspect-ratio photos: crop via CSS (object-fit: cover) so the grid stays visually consistent rather than distorting the image.
- Slow-loading or failed image requests: show a skeleton/placeholder while loading and fall back to the initial's avatar on error.

Login page

- Restyled error/validation messages must preserve the exact existing message text and triggering logic: only colour, spacing and typography change.
- Autofill, password managers and keyboard navigation must continue to work exactly as before the styling update.
- Responsive breakpoints must not change form field order, required-field behaviour, or submission flow.
- 'Continue with Google' button must keep Google's required branding elements (logo, wording) per Google's sign-in button guidelines: only surrounding layout/spacing may adapt to the new style, not the button's own brand mark.
- Password placeholder text that currently doubles as a rules. ('Min. 8 characters, 1 uppercase, 1 number') must remain visible and accurate if the restyle changes how placeholder text is displayed.
-
